iStayHealthy v3.2.4 iPhone live on iTunes

June 7, 2013 By iStayHealthy

It’s been a busy month for iStayHealthy. After the release of a new Android version I uploaded a new one for the iPhone, too. Version 3.2.4 brings the following improvements

- import data from email attachments (of iStayHealthy.isth files). This will be needed for integrating the app with clinical services in the UK
- side effects menu has been made a bit simpler (I hope)
- web links to HIV info/web sites are being provided
- login details recovery
