son Europe

December 1, 2003 By Staff

Women who got HIV via sex lost T cells more slowly than all other HIVers in a 5,800-person European/Australian study.

HIVers co-infected with hep C are at greater risk for diabetes than solo HIVers, U.S. war veterans' medical records show.

University of Maryland researchers are using PET scans to find reservoirs of HIV for possible removal in the future.

A study of 407 HIVer men in San Francisco found that those with a "positive" outlook had slower disease progression.

A small study found that high doses of vitamin C (1,000 mg a day) dropped blood levels of indinavir (Crixivan) by 20 percent.
