Microsoft Joins the Hunt for an HIV Vaccine

February 27, 2012 By Laura Whitehorn

Using email spam filter programs, Microsoft researchers are helping seek an HIV vaccine. HIV's constant shape-shifting makes it hard to locate weak points for a vaccine to block. With PhyloD, a computer system that analyzes how individual immune systems respond to HIV mutations, a Microsoft-led research team has identified roughly six times as many possible attack points as had previously been found.
