

# Smear Campaign

June 1, 1998 By [Lark Lands, PhD](#)

---

Many AIDS docs are slow to catch up with the latest research developments—a failing that risks PWAs' lives. But for women with HIV, the tracks and traditions of medical sexism slow the information train even more than usual. For years, word of the heightened risk of cervical cancer for HIV positive women—and thus the importance of Pap smears—has been poorly spread (p. 88). Now, a new advance in testing technology offers the chance to catch even more cases early. This highlights yet again the crucial importance of PWAs taking charge of their own health care and pushing their practitioners to stay state-of-the-art on these matters of life and death.—Bob Lederer

## DO TELL

HIV news you can use

Page 86

## RESOURCES

Ladies first

Page 87

## TESTING 1, 2, 3

Spread 'em!

Page 88

## WARNING

These are your meds on drugs

Page 90

## WHAT THIS MEANS

Just a little detectable: So what?

Page 91

## DR. ME

Remedies for bad hair day

Page 92

## INDEX

Where to find it
