Warning!

May 1, 2005 By Laura Whitehorn

HIVers taking protease inhibitor **Reyataz** shouldn’t take proton-pump inhibitors (PPIs), stomach meds like Prilosec (omeprazole): The PPIs cause the PI levels to fall too low.
Pregnant women shouldn’t use **Crixivan**—the first PI crossed off the preggers list.
Taking the antibiotic rifampin (it fights staph, TB and other infections) with **Norvir-boosted Invirase** can damage your liver.
