

Healthy Technology

November 13, 2012 By Jennifer Morton

Mobile and digital information technology can help health care providers and patients in many ways. In addition to making the health care system more efficient, it can help doctors diagnose health problems sooner, reduce medical errors and provide care at lower costs. Our June 2012 survey asked readers to weigh in on how they use health-related technology and how comfortable they are with the idea of sharing their medical information electronically.

68% would use a website to store and update their health information

86% would use a website to check for drug interactions

Have you ever used a health-related mobile phone application?

74% - Yes

26% - No

Have you ever requested an electronic copy of your personal medical records?

23% - Yes

77% - No

92% of readers have Internet access

91% of readers own a mobile phone

49% of readers own a smartphone

Have you ever filled or renewed a prescription online?

41% - Yes

59% - No
