

National Asian & Pacific Islander HIV/AIDS Awareness Day 2022

This #APIMay19, do your part to combat HIV stigma in Asian and Pacific Islander communities. Here's how.

May 19, 2022 By [Trent Straube](#)

Thursday, May 19, marks National Asian & Pacific Islander HIV/AIDS Awareness Day (#APIMay19) 2022. Although Asian Americans are not one of the main population groups disproportionately affected by [HIV](#), the awareness day offers a chance to highlight education, prevention and treatment efforts in [Asian communities](#) as well as the unique challenges they face in fighting [stigma](#) and dealing with related health issues.

For example, compared with other ethnic groups, Asians and [Pacific Islanders](#) (API) are less likely to be taking [PrEP, or pre-exposure prophylaxis](#), the pills and injections that prevent HIV. What's more, in recent years, especially since COVID-19, Asians and Pacific Islanders have experienced increased racism and health inequities.

How can we prevent HIV in Asian and Pacific Islander communities? We can start talking about HIV prevention options like condoms and PrEP, about testing, and about medicines that treat HIV: <https://t.co/KKXuSXwAPj>.

#APIMay19 is organized by the [San Francisco Community Health Center](#). The day was formerly referred to as #NAPIHAAD. Search both hashtags on social media for events in your neighborhood

and to find awareness campaigns like those embedded in this article.

In honor of [#APIMay19](#), our next Ending the [#HIV](#) Epidemic Regional Learning Collaborative on Tuesday, May 24 from 10 AM - 11:30 AM PT will discuss strategies and approaches to tackle HIV in Asian and Pacific Islander communities! Register Now:

In 2019, Asians made up about 6% of the U.S. population and accounted for nearly 1.5% of people living with HIV . That same year, [according to estimates by the Centers for Disease Control and Prevention \(CDC\)](#), there were about 34,800 new HIV diagnoses. Of those, about 550 were among Asians (overall, close to 1.2 million people in the United States are living with HIV; about 87% of them know their status).

However, the API community is the [fastest-growing U.S. minority community](#). Writing in an HIV.gov blog, [Lance Toma, chief executive officer of the San Francisco Community Health Center](#), adds that one of the challenges in HIV prevention and awareness is the “silence around sexual health, queer sexual orientation and gender identity in API communities—the same is true for HIV. Adding to the stigma, members of the API community face familial shame, discrimination and other barriers when it comes to accessing HIV testing, prevention, treatment and care. The work to combat and improve these barriers is complex, heightened by our non-monolithic cultural identity, explicit distinctions and different languages—all of which present unique challenges.”

We can help [#StopHIVStigma](#) in Asian and Pacific Islander communities by being intentional and thoughtful in how we talk about people, health, and

experiences.
