

Ourselves, Growing Older

August 6, 2013 By Jennifer Morton

Let's face it—we're all growing older. But thanks to advances in treatment, people with HIV are living longer than ever. That's the good news. The bad news is that HIV and its medications can increase the risk of certain health conditions including heart disease, cancer, diabetes and osteoporosis. POZ recently asked you how you are aging with HIV. Here are your responses:

How is your physical health?

22% - Excellent

55% - Good

21% - Fair

2% - Poor

How is your mental health?

23% - Excellent

48% - Good

23% - Fair

6% - Poor

Do you have an undetectable viral load?

88% - Yes

12% - No

Do you take prescription meds for anything other than HIV?

72% - Yes

28% - No

Do you have a living will or designated health proxy?

48% - Yes

52% - No

Do you have an IRA or other retirement plan?

44% - Yes

56% - No

How many of you have been screened/tested for other diseases?

68% - liver disease

67% diabetes
61% depression
60% kidney disease
56% cardiovascular disease
37% skin cancer
29% osteoporosis
