Android maintenance release for iStayHealthy, v3.0.1

May 14, 2013 By iStayHealthy

Hi all,
yep - a couple of users experienced some problems with the new version of iStayHealthy for Android. I just posted a maintenance release v3.0.1 that should fix them:

* PreviousMedication - when you tried to edit an entry the app would exit (now fixed)
* orientation changes: this was weird. But some users had the app exit when they switched between landscape and portrait modes. In any case: for phones the orientation is now fixed to portrait - but tablets should be able to switch
* a couple of minor bug fixes/improvements
