

iStayHealthy 3.1.0 for Android released

September 27, 2014 By [iStayHealthy](#)

Another new version of iStayHealthy. This time for Android.

Since its last release (3.0.5) a whole new set of drugs have been licensed. I also thought it might be a good idea to include drugs against HepC, e.g. **Daklinza**

Therefore the headings has been changed to 'Antiviral' rather than HIV.

It was also necessary to introduce 2 new categories in the med listings: Boosters and Other Inhibitors.

[Click here](#) to download the iStayHealth app.
