iStayHealthy and iCloud

September 18, 2014 By iStayHealthy

In August I upgraded iStayHealthy for iPhone/iPad. There has been one really annoying problem - i.e. users were no longer able to see their data. This is down to changes made to iCloud. In particular when upgrading the device to iOS8 (which now has iCloud Drive).

In many of the support emails I sent out I recommended that users turn off the iCloud settings for the app.
It only takes 3 simple steps to do that:

- - open the 'Settings' app on your Home Screen
- - select 'iCloud' and then 'Documents & Data' (iOS7) - or 'iCloud Drive' (iOS8)
- - turn the switch for iStayHealthy to 'Off'

Then restart the app
In future versions of the app, I will disable iCloud settings.
