iStayHealthy version 3.2.1 troubleshooting

October 19, 2012 By iStayHealthy

I have spent a lot of time talking to users who experience iStayHealthy crashes - after they upgraded to version 3.2.1

There seems to be a common thread relating to iStayHealthy trying to sync up with iCloud.

After talking to users, the following workaround seems to resolve the issue:

- go to the 'Settings' menu on your Home Screen
- select the iCloud option if it is available
- in there scroll down until you see 'Documents & Data'
- check if 'Documents & Data' is set to '**On**'
- if it is 'OFF' - try changing it to 'On'

In the meantime, I am working hard to resolve this issue as quickly as possible
