New iPhone version of iStayHealthy available

May 8, 2012 By iStayHealthy

The latest version of iStayHealthy - version 3.1.0 - is now available on iTunes. I put a number of new features as well as bug fixes in:

- iCloud backup/syncing of your iStayHealthy data.

- Images upgraded to Retina displays

- Users can modify their results dates, medication start dates

- Some bug fixes regarding Dropbox backup/restore

- Some improvements regarding usability

- Other bug fixes

- import data by email attachments (more about that in a separate blog).

- Finally, the branding of iStayHealthy is now linked to POZ.com.

Because of iCloud and other features, the new version of iStayHealthy is available only for devices with iOS version 5.1 upwards. I will send out a backward compatible version shortly.
If you have an iCloud account already: Go to the 'Settings' menu on your Home screen and select 'iCloud'. In there make sure that your 'Documents & Data' tab is set to 'On'.
And off you go.
At first load-up iStayHealthy may take a while to start-up, this is because iCloud is creating a list of all the things it needs to backup.
