

Very Early HIV Treatment: A Functional Cure?

July 25, 2012 By [Peter Staley](#)

Frankly, it's too soon to say. But an intriguing study being released tomorrow at the 19th International AIDS Conference in Washington, DC will suggest that starting anti-HIV therapy very soon after infection could allow patients to stop therapy and still suppress the virus the rest of their lives -- a so-called functional cure.

Of course, this might only be useful for the newly infected. The rest of us will need to wait for a great deal more research in this area.
