Visit https://clinicalinfo.hiv.gov/en/guidelines/hiv-clinical-guidelines-adult-and-adolescent-arv/ for the full DHHS guidelines for adults and adolescents.

General Info

Rescriptor is an HIV medication. It is in a category of HIV medicines called non-nucleoside reverse transcriptase inhibitors. Rescriptor was approved by the U.S. Food and Drug Administration for use by people living with HIV in 1997.

Rescriptor must be used in combination with other HIV drugs.

Dosage

Adult Dose: Two 200mg tablets three times a day or four 100mg tablets three times a day.

Pediatric Dose: N/A

Dosing Info: Take with or without food.

Side Effects

The most common side effect of Rescriptor is mild-to-moderate skin rash. In a small number of patients, rash has been serious and resulted in death. Therefore, if you develop a rash with any of the following symptoms, call your doctor immediately: general ill feeling, fever, muscle or joint aches, blisters, mouth sores, conjunctivitis (inflammation of the inner surface of the eyelids), swelling of the face, tiredness.

Other possible side effects include nausea, diarrhea, headache, and fatigue.

Drug Interactions

For a review of drug interactions, including prescription and over-the-counter medications and supplements that should not be taken with Rescriptor or may require dose adjustments, consult the Rescriptor package insert: https://www.viivhealthcare.com/media/32314/us_rescriptor.pdf

Other Info

Before taking this medication, tell your doctor if you have kidney disease or liver disease (including hepatitis B). In addition, tell your doctor if you are pregnant or planning to become pregnant, if you are breastfeeding, and all your medical conditions, including all prescription and over-the-counter medications and supplements you are taking.
